Individual Dose Reporting Form for the Marshall Islands Program

T.F. Hamilton and S.R. Kehl

November 2005

This form represents the standard reporting format for individual dose reports issued to volunteers participating in the Marshall Islands Individual Radiological Surveillance Monitoring Program. The dose estimates as based on measurements of internally deposited cesium-137 (^{137}Cs) and plutonium.

DISCLAIMER

This document was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States Government nor the University of California nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Lawrence Livermore National Laboratory Marshall Islands Individual Radiological Surveillance Monitoring Program

Annual Radiation Dose Report for Calendar Year (Year_field)
for (Subject's-Name-Field), Identification Number (Id-Field)

Monitoring Program	Type of Dose	Dose Equivalent (mrem)
Whole Body Counting	CEDE	(WBC-data-field-mrem)
Plutonium Bioassay if available)	CEDE	(PuBio-data-field-mrem)
TOTAL CALENDAR YEAR DOSE = (wbc/PuBio-sum-field-mrem) mrem		

Notes:

1. For perspective, the annual dose limit for the public as recommended by international agencies is 100 mrem per year. The Republic of the Marshall Islands has adopted a more restrictive standard for cleanup of radioactively contaminated sites in the northern Marshall Islands of 15 mrem per year, as recommended by the United States Environmental Protection Agency (EPA) under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).
2. Please contact your local whole body counting technician(s) if you have any questions concerning your dose report.
